DETAILED ACTION***Election/Restrictions***

Applicant's election with traverse of Species IV in the reply filed on 03/02/2007 is acknowledged. The traversal is on the ground(s) that unity of invention is considered to be met because all the alternatives have a common property or activity and a common structure is present, i.e. a significant structural element is shared by all alternatives or where the common structure cannot be the unifying criteria, all alternatives belong to a recognized class of chemical compounds. This is not found persuasive because the common structure element of structural element (1) does not have significance. MPEP 1850 III.B.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Hisakazu (JP 2000-327387).

As to composition containing component A with structural elements (1), (2), (4) and (5) in **independent claims 14 and 15**, Hisakazu (JP 2000-327387) disclose a cement admixture compound (C): in which formaldehyde addition condensation is possible are a kind or two sorts or more of compounds chosen from the group of a melamine or its derivative, a phenol or its derivative, a urea or its derivative, aminobenzene sulfonic acid, its derivative, alkylamino benzenesulfonic acid or its derivative (Claim 4), which reads on the structure of component A in the composition of instant claims.

As to component B of solvent or water in **independent claim 14 and 15**, Hisakazu discloses the compound (A) a formaldehyde addition condensation product – polyoxyalkylenemonoamine (Abstract), which is solvent.

As to treatment of metal surface in **independent claim 14** and deposition of metals or metal alloys on plastics surfaces in **independent claim 15**, the disclosure of Hisakazu meets the requirements of present claims in terms of same structural elements-containing chemicals, it would be reasonable to presume that the Admixture composition of Hisakazu would fulfill the utilities of treatment for metals surface, deposition of metals or metal alloys in light of their structural similarities. The burden is shifted to applicants to establish that the composition of instant claims is not the same as or obvious as that set forth by the reference.

Allowable Subject Matter

Claims 16-17,19-21 and 23-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments, see pages 11-15, filed on 11/13/06, with respect to the rejection(s) of claim(s) 14-17, 19-21 and 23-25 under 103 rejection in view of Keller et al (US005494535A), Kucera (us006130289a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Hisakazu (JP 2000-327387).
